

Hydracarzynite $\text{H}_2\text{N}_2\text{O}_6\text{CZn}$

Permafrost : Cellular Life Molecules of Extraterrestrial Planets

Important Raw Guidelines to follow when performing hand to equipment and material interaction within micro gravity or a vacuum, see attached:

“Cholesterol Velocity and Human Interaction with Energy Sources.”

Conduction = Gas proportional * multiplied at the: (Sigma of (Liquid congruency) ^ 2 Squared)

This method can be followed to operate diet contributions from technology developed with space travel in mind or even operate equipment developed with materials that adhere to this formula allowing for optimal safety and performance.

Lab Analysis with Interest of Hydracarzynite outside the field of Aerospace or where such is not apart of DART Meadow LLC or Radical Deepscale LLC:

First Study Documentation Here involving the effects of Hydracarzynite on 3M's PFOS/PFAS

Math Analysis shows Velocity (Order of Operation Number 12) is more prominent in advancing cancer side effects without the presence of PFOS/PFAS in the human body versus Temperature (Order of Operation Number 11)

Primary Remedy Focus regarding the sulfur atom:

Fluorine 9 Focus: Both Shells: 2 electrons and 9 electrons

Oxygen 8 with quad connections to sulfur from dual Atoms

Hydrogen 1

Secondary Remedy Focus:

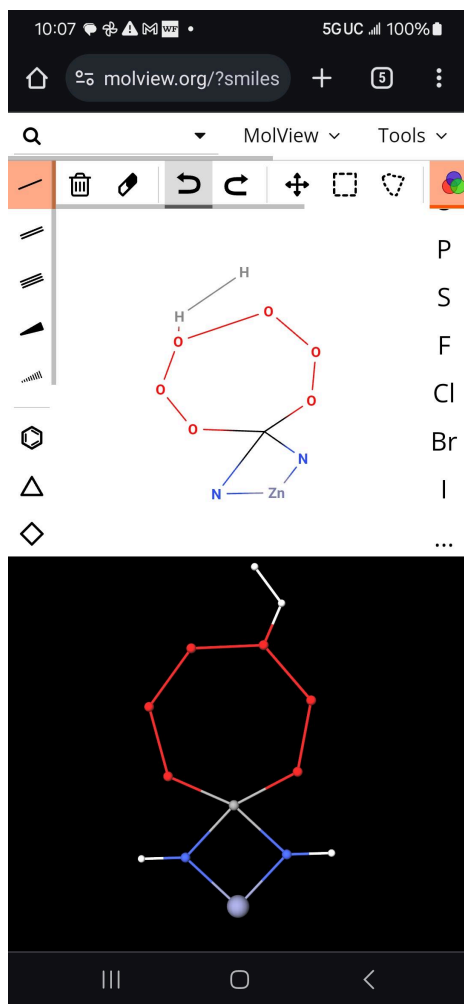

Carbon 6 source of velocity foundation

Sulfur 16

The Math operation bonding indicates the velocity is more prominent at the heart of molecular interaction from a single Fluorine directly across to the Hydrogen while tripping a single Oxygen. Without carbon in the scenario it is obvious the chemical itself and its interactive abilities are very balanced in all interactive stages and would be even more so between temperature and velocity if carbon was not of PFOS/PFAS but the plus is the fact carbon is part of the ingredients to the compounds which narrows the interactive abilities down to just velocity as the primary port of any interaction or stages/states.

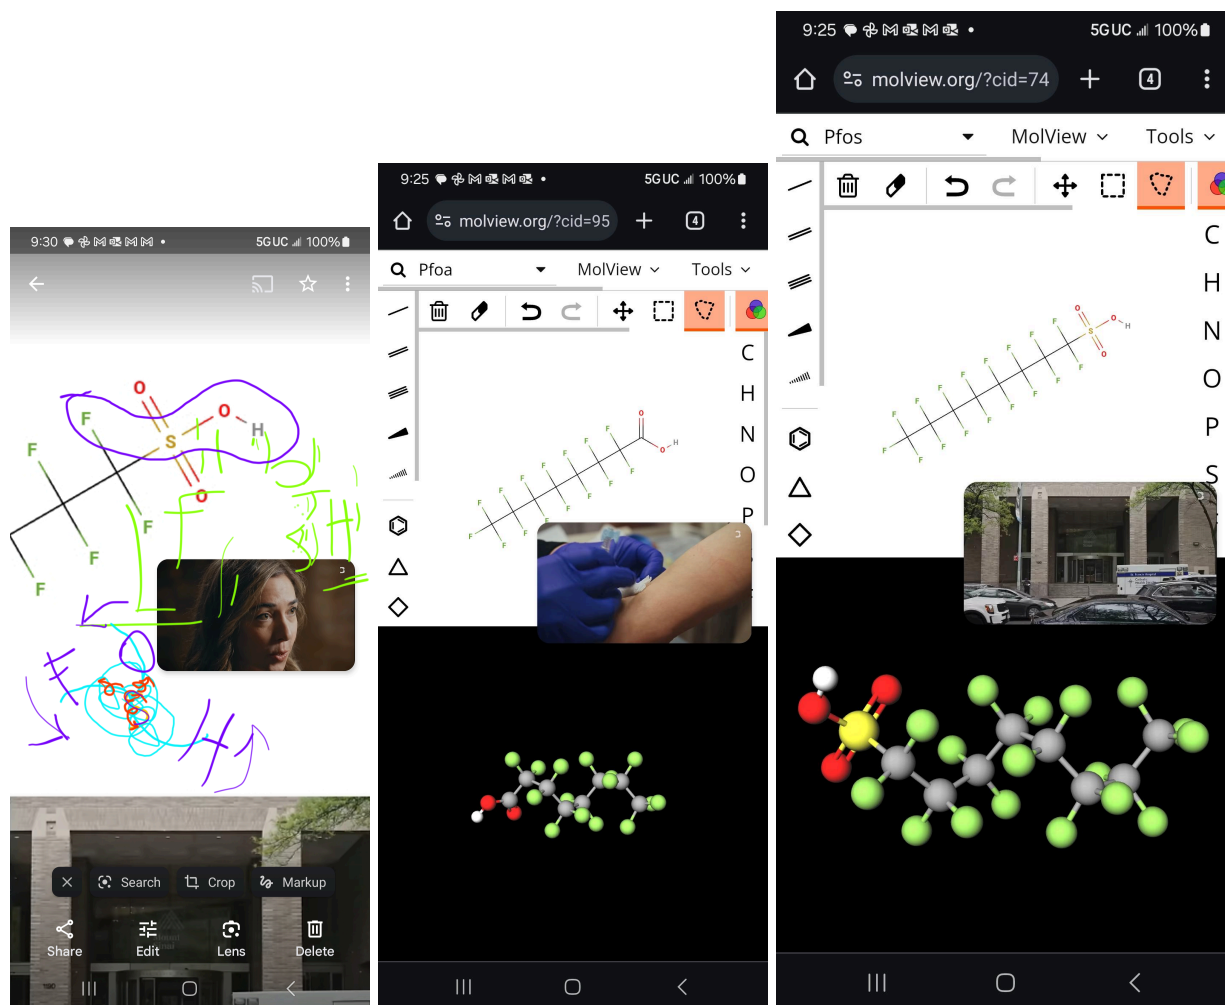

The Mathematical Statistic is evident without analysis due to the quad connection of the two Oxygen atoms to the Sulfur. Therefore for any type of interaction of any state or stage only the 3 atoms Fluorine, Hydrogen and Oxygen can perform the same Neutron dynamic regardless of their numbers or other physics involved such as pressure/density, temperature, volume and mass, again due to the quad connections of oxygen to sulfur forcing the balance among and

phase or interaction. With carbon present the physics based on the natural orders of math found in these compounds operates with velocity foremost as it obviously should with carbon coming in hierarchy before sulfur or oxygen.

Suggested Remedy Research for cancer related matters to the 3M compound would be to isolate the core Neutron Velocity Dynamics that should be found as foundational among the Fluorine Neutron Velocity Dynamics then setup an equivalent prototype physics experiment with physical material of gas, liquid or solid that can only mechanically perform at the equivalent velocity mechanics of the Fluorine's Neutron Velocity Dynamics any related abilities are operable in these compounds. Foremost when doing such an experiment the experiment should exceed the equivalent mechanics while maintaining the same mechanics such as if the mechanics could only be applied to a whole another compound or material where $2-2=0$ or a volume of vacuum then this vacuum is obviously $((2-2=0)^2-(2-2=0)^2)=\text{Vacuum Squared}$ or Concentrated to performing an excessive mechanic analysis. When such an experiment is conducted the forging of tools and tooling that are directly related to the physics's "NATURAL" elementary properties are exposed for claiming. The excessive experiment is one method to

replicate the side effects from these compounds to say the compounds are not even present in the human body to begin with.
